

SAP Manager (m/w/d)

NDT Global is the leading provider of ultra-high-tech diagnostic inspection solutions, advanced data analysis and integrity assessment services for ensuring the safety and longevity of energy-sector infrastructure assets. Recognized as the forerunner in ultrasonic inspection technologies comprising Pulse Echo, Pitch-and-Catch and Phased Array, as well as Acoustic Resonance (ART Scan) methodologies, the company also deploys a range of non-ultrasonic technologies, such as Inertial Measurement Units, with more under development. NDT Global strategically applies its inspection technologies to detect, diagnose and model various types of threat—circumferential or axial cracks, metal loss, geometry, mapping, and more—across diverse classes of assets. By providing predictive, decision-ready insights driven by the world’s most accurate data, NDT Global enables the conditions for asset owners to optimize infrastructure health and drive operational efficiencies while reducing risk and minimizing their carbon footprint.

Purpose:

The goal of the SAP Manager is to manage a high performing team focused on developing and managing key systems for the organization and control of various business processes esp. in finance, supply chain and operations. This position is also responsible for the continuous improvement of the systems as well as the development of the ERP team and the users of the systems. Defines, designs, develops, prioritizes, and implements systems that are fit for purpose and free from fundamental design flaws with the input from project teams made up of user and technical personnel.

Responsibilities:

- Leads the team of SAP Specialists from a technical perspective and with managerial responsibility including hiring and disciplinary measures, personnel strategies, training, coaching, and performance appraisals achieving departmental goals and excellent team performance.
- Translates business objectives into project workstreams with clearly defined scope, objectives, timing, deliverables, resources, and key measures of success
- Establishes and maintains relationships with internal and external key partners to understand business needs, ensures alignment on objectives and ensures ongoing buy in across all ERP project activities
- Supports the system configuration and design to ensure that it is working as designed and as per business requirements
- Works with and support of business process owners to ensure effective use of ERP system by programming, creating connections to other systems for exchange of data and overall application of improvements to get the most out of the ERP system (including the support for report writing and statistics gathering)
- Drives continuous improvements of established practices, policies, methodologies and processes and manages the associated changes by leveraging best practices, standardization of processes and automation
- Develops and maintains documents on application architecture and configuration ensuring managed systems adhere to applicable regulatory requirements

Requirements:

- A University degree in Computer Science/Engineering, Finance/Accounting or related education is preferred
- Minimum of 6 years of SAP experience is required
- Minimum of 1-3 years of experience in a managerial or supervisory role within a multinational environment is required
- Experience in full life cycle SAP (preferred SAP S4/Hana) implementation
- In depth knowledge of Project Management methodologies
- Intermediate knowledge in continuous improvement process is preferred
- Background in a service business is preferred
- Fluency in English required. German is also highly preferred
